VAUGHAN CHOPPER PUMPS SOLVE RAGGING PROBLEMS FOR SOUTH EAST WATER

Pump Systems Ltd's local Vaughan Representative in Melbourne, **Metaval Consolidated Pty Ltd**, have just completed a project at Mt Martha STP for the supply of four new digested sludge recirculation pumps.

South East Water of Melbourne, Australia have just recently installed four Vaughan vertical dry pedestal chopper pumps for handling recirculated digester sludge at the Mt Martha Sewage Treatment Plant. The new equipment was to replace macerator and progressive cavity pump combinations that were high in maintenance and were prone to clogging. By retrofitting a Vaughan chopper pump, two separate pieces of mechanical equipment are essentially reduced to one. This not only saves space, but provides ease of servicing and simplifies inventory.
